

Hyperion 233v4 HL 5.5kV pulsed DC controller

Product Code: 233v4HL

The Hyperion 233v4 HL pulsed DC controller is a compact unit designed primarily for direct powering of two Meech 924EX pulsed DC ionizers. If more ionizers are required, they can be connected via distributors.

The 233v4 HL has all the setup and monitoring features you would expect from a Hyperion product. Fully BarMaster compliant, output voltage, frequency and balance can all be adjusted for particularly difficult applications and very sensitive materials in EX zones.

One of the key features of the 233v4 HL is Meech Ion Current Monitoring technology, which allows for greater control of ionization performance by monitoring the efficiency of the ionizing output. This is supported by built-in output signals that alert operators to the need to clean the connected ionizer to achieve maximum performance.
